CVS Repository

1. CVS Repository

Most users of the source code probably don't need to have day to day access to the source code as it changes. For these users we provide easy to unpack source code downloads via our download pages.

View the Source Tree

The latest CVS sources can be viewed at http://cvs.apache.org/viewcvs/ws-juddi/

Access the Source Tree (AnonCVS)
So, you've decided that you need access to the source tree to see the latest and greatest code. There's two different forms of CVS access. The first is anonymous and anybody can use it. The second is not and you must have a login to the development server. If you don't know what this means, join the mailing list and find out.

Anyone can checkout source code from our anonymous CVS server. To do so, simply use the following commands (if you are using a GUI CVS client, configure it appropriatly):

```
cvs -d :pserver:anoncvs@cvs.apache.org:/home/cvspublic login
password: anoncvs

cvs -d :pserver:anoncvs@cvs.apache.org:/home/cvspublic checkout ws-juddi
```

Full Remote CVS Access
If you are a Committer and have a login on the Apache development server, this section is for you. If you are not a Committer, but you want to submit patches or even request commit privelages, please see the Jakarta GuideLines page (we follow the same rules) for more information.

To have full access to the CVS server, you need to follow the links depending on the operating system you are using:

- Unix
- Windows
